

# Standard Permit for Rock Crushers: Production & Truck Traffic Comparison

## Proposed Std. Permit for Rock Crushers, *Created by SB 1757*

**1,500 tons/hour = 75 trucks/hour**

## Current Std. Permit Production Limit

**200 tons/hour =  
10 trucks/hour**

= One haul truck can carry 20 tons of aggregate

*\*Truck traffic calculations exclude downtime for maintenance, permit restrictions, and any employee or other service vehicles entering and existing the mining facility.  
For every haul truck that leaves, another will be arriving.*
